

PATENT PENDING

THE ORIGINAL SCREED BRACKET™ CC502

The Original Screed Bracket™ shown on a two-by-four board and our professional Redwood Striker™ Screed CC439 (not included)

- The Original Screed Bracket™ allows you to maximize the efficiency of every screeding motion, and reduces fatigue by allowing you to cover more surface area with less effort.
- Screed while comfortably standing instead of kneeling. This is less strain on your back and knees, and keeps your hands out of the concrete.
- The Original Screed Bracket™'s patent pending angle gives you angle consistency, strength, and durability. It is ergonomically designed to give you the most comfortable working angle when pushing or pulling.
- Create an economic screed from a two-by-four that will give you professional results. This is a great option for smaller contractors and do-it-yourself home projects.
- The lightweight handles quickly and easily attach to aluminum, magnesium, or wood screeds or two-by-four boards measuring 1-1/2" thick (not included). Fits screeds of any length, but works best on those 4-8 feet long.
- Use to level materials in concrete and landscaping work.
- Easily maneuver in compact or obstructed areas.
- Requires eight 1" coarse thread drywall screws to attach brackets to screed or board (not included).
- Each ready-to-display box includes 2 handles.
